HTS Production is a modern solution for the TV broadcast industry, suitable for both large reality shows and small entertainment projects.

The main technical problem in today's entertainment media production is to deal with large amounts of media data, and to develop an efficient multi-level workflow. Solving this task directly affects the quality of the resulting project's master.

HTS Production is a universal tool for detailed media processing during the filming process. Our technology allows editing team to maximize their efficiency and speed while working with any amount of video data, by using rich metadata structure.

HTS Production greatly improves main project's «health indexes» - Quality, Time, Creativity, Money and Stress..

Stress - entertainment projects often imply high master output pace, which in combination with non-efficient workflow result in large amount of stress for the whole team. **HTS Production** takes care of every team member's peace of mind.

Quality - maintaining rich metadata for the filmed media, in combination with convenient navigation allows finding all the necessary «points of interest», which helps to create high-quality project's master. **HTS Production** pays attention to the details.

Time - you can use previously created draft stories to build completed film material, thus reducing its duration and spending less time to create the final

Creativity - optimized workflow allows devote more time to creativity in building the final master. **HTS Production** gives you time for creation.

Money - an efficient workflow always results in significant budget savings. **HTS Production** proves this in practice.
